

GenAI Powered Data Analytics Job Simulation

Summer Internship / Industry Experience Presentation

Anuj Sharma

Forage | Completed October 2025

Program Overview

Practical job-simulation experience focused on data analytics and AI.

Business context: collections strategy and delinquency risk.

Four core areas of practical work were recorded on the certificate.

Objectives

Understand exploratory data analysis and risk profiling.

Explore AI-based delinquency prediction.

Communicate findings through business reports and data storytelling.

Connect analytics to an AI-driven collections strategy.

Exploratory Data Analysis & Risk Profiling

Examine data for meaningful patterns and relationships.

Identify observations relevant to risk assessment.

Organize analytical findings to support business decisions.

Predicting Delinquency with AI

Use available information to identify predictive signals.

Understand how AI can support risk-based prioritization.

Connect prediction outputs with practical decision-making.

Business Reporting & Data Storytelling

Translate analytical findings into clear business communication.

Highlight what the data indicates and why it matters.

Present insights in a way that supports strategic decisions.

AI-Driven Collections Strategy

Use risk information to prioritize cases.

Connect predictive analysis with collections actions.

Focus on efficient, data-informed decision-making.

Skills & Learning Outcomes

Exploratory data analysis

Risk profiling and analytical thinking

AI-assisted prediction concepts

Business reporting and data storytelling

Strategy-oriented use of analytics

Conclusion

The simulation provided practical exposure to applying analytics and AI in a business setting. It strengthened the connection between technical analysis, communication, and strategy.
