

# SUMMER INTERNSHIP / INDUSTRY EXPERIENCE REPORT

GenAI Powered Data Analytics Job Simulation

**Student Name:** Anuj Sharma

**Program:** GenAI Powered Data Analytics Job Simulation

**Platform:** Forage

**Completion:** October 2025

**Important note:** The attached completion certificate identifies this experience as a Forage job simulation completed in October 2025. This report describes the work accurately and does not alter or misrepresent the certificate.

## **1. Introduction**

This report presents the practical work completed by Anuj Sharma through the “GenAI Powered Data Analytics Job Simulation” on Forage. The certificate records completion in October 2025. The experience focused on applying data analytics and artificial intelligence concepts to a collections-strategy business context.

## **2. Objectives**

The main objectives of the job simulation were to develop practical understanding of exploratory data analysis, risk profiling, AI-assisted delinquency prediction, business reporting, data storytelling, and implementation of an AI-driven collections strategy.

## **3. Program Overview**

The program was structured around practical tasks rather than classroom-only learning. The completion certificate records four major areas of work: exploratory data analysis and risk profiling; predicting delinquency with AI; business report and data storytelling for collections strategy; and implementing an AI-driven collections strategy.

## **4. Exploratory Data Analysis and Risk Profiling**

The first area involved examining data to understand patterns and risk characteristics. Exploratory data analysis helps identify distributions, relationships, unusual observations, and factors that may distinguish higher-risk and lower-risk cases. Risk profiling then organizes these observations into a form that can support business decisions.

## **5. Predicting Delinquency with AI**

The simulation included work on predicting delinquency with AI. Such a task requires translating available customer or account information into meaningful predictive signals and using those signals to identify cases that may require attention. The exercise demonstrates how AI can support prioritization and decision-making in collections.

## **6. Business Report and Data Storytelling**

The program also covered business reporting and data storytelling for a collections strategy. Data storytelling focuses on communicating analytical findings clearly so that decision-makers can understand what the data indicates, why it matters, and what actions may follow from the findings.

## **7. Implementing an AI-Driven Collections Strategy**

The final recorded area was implementation of an AI-driven collections strategy. This connects analysis and prediction to practical action: using risk information to prioritize cases, support appropriate interventions, and improve the efficiency of collections-related decisions.

## **8. Skills and Learning Outcomes**

The experience provided practical exposure to exploratory data analysis, risk assessment, AI-based prediction, business communication, data storytelling, and strategy-oriented thinking. It also demonstrated the importance of connecting technical analysis with a real business objective.

## **9. Conclusion**

The GenAI Powered Data Analytics Job Simulation provided a structured opportunity to practice data analytics and AI concepts in a business scenario. The work strengthened understanding of how data can be analyzed, converted into predictions, communicated through business reports, and used to inform an AI-driven strategy.

## **10. Certificate Verification**

The completion certificate issued by Forage records the student name as Anuj Sharma, the program as “GenAI Powered Data Analytics Job Simulation,” the completion date as October 15th, 2025, and an enrolment/user verification code. The original certificate should be attached as the final appendix when submitting the report.

## **Appendix A — Certificate of Completion**

Attach the original PDF certificate supplied with this report. Do not edit its date, title, issuer, or verification information.
