

An Internship Report
Of
GENAI POWERED DATA ANALYTICS JOB SIMULATION

Submitted
To
[SCHOOL OF COMPUTER SCIENCE AND ENGINEERING]
[IILM UNIVERSITY GREATER NOIDA]

In partial fulfilment of the requirement of degree of
[BTECH (CSE)]

By
ANUJ SHARMA
Roll Number: 25SCS1003004667
Batch: 2026-27

CANDIDATE'S DECLARATION

I, ANUJ SHARMA, hereby declare that this report titled “GenAI Powered Data Analytics Job Simulation” has been prepared based on the practical job simulation completed through Forage. The report accurately describes the program and the activities documented by the completion certificate. I have not altered the original certificate or its dates and understand that the experience is identified as a job simulation rather than an employment internship.

Student Name: ANUJ SHARMA

Roll No.: 25SCS1003004667

ACKNOWLEDGEMENT

I would like to express my gratitude to everyone who supported me in completing this learning experience. I am thankful for the opportunity to gain practical exposure to data analytics, artificial intelligence, risk profiling, business reporting, data storytelling, and AI-driven collections strategy.

I am grateful to Forage for providing a structured job simulation through which these practical tasks could be explored. I also thank my college and faculty members for their guidance and encouragement in completing the academic requirements associated with this experience.

I also express my gratitude to my family for their support and encouragement.

Student Name: ANUJ SHARMA

Roll No.: 25SCS1003004667

TABLE OF CONTENTS

1. Candidate's Declaration
2. Acknowledgement
3. Internship Completion Certificate
4. Project Description
 - 4.1 Introduction
 - 4.2 Organization / Platform Profile
 - 4.3 Problem Statement
 - 4.4 Project Objectives
 - 4.5 Scope of the Project
 - 4.6 Technologies and Tools Used
 - 4.7 Analytical Workflow
 - 4.8 Methodology
 - 4.9 Expected Outcomes
 - 4.10 Certificate and Verification
5. Bibliography / References

3. INTERNSHIP COMPLETION CERTIFICATE

The original Certificate of Completion should be inserted/attached in this section.

The certificate identifies the program as “GenAI Powered Data Analytics Job Simulation,” records completion on October 15th, 2025, and states that practical tasks were completed during October 2025. It also identifies Forage as the issuer and includes verification information.

4. PROJECT DESCRIPTION

4.1 Introduction

This report presents an account of the GenAI Powered Data Analytics Job Simulation completed through Forage. The certificate records the completion date as October 15th, 2025 and describes practical work carried out during October 2025. The simulation focused on applying data analytics and artificial intelligence concepts to a collections-strategy business context.

The documented activities included exploratory data analysis and risk profiling, predicting delinquency with AI, preparing a business report and using data storytelling for collections strategy, and implementing an AI-driven collections strategy.

4.2 Organization / Platform Profile

Forage is the platform identified on the completion certificate as the issuer of the GenAI Powered Data Analytics Job Simulation. The certificate also contains enrolment and user verification codes. This report refers to the experience as a job simulation because that is the terminology used on the original certificate.

4.3 Problem Statement

The simulation addressed a business-oriented collections problem in which data analysis and AI can be used to understand risk, support delinquency prediction, communicate insights, and inform collections strategy. The central learning problem was to connect analytical findings with practical business decisions.

4.4 Project Objectives

- To understand exploratory data analysis and risk profiling.
- To explore the use of AI for predicting delinquency.
- To develop an understanding of business reporting and data storytelling.
- To understand how analytical insights can support a collections strategy.
- To understand the implementation of an AI-driven collections strategy.
- To connect technical analysis with business-oriented decision-making.

4.5 Scope of the Project

The documented scope covers the four practical areas stated on the completion certificate: exploratory data analysis and risk profiling; predicting delinquency with AI; business report and data storytelling for collections strategy; and implementing an AI-driven collections strategy. The report does not claim specific software, datasets, model architectures, deployment environments, or production systems that are not stated on the certificate.

4.6 Technologies and Tools Used

The certificate specifically documents the use of data analytics and AI concepts, but it does not list particular programming languages, libraries, datasets, cloud platforms, or model architectures. Therefore, this report does not assign specific technologies that are not supported by the source certificate.

4.7 Analytical Workflow

- Data understanding and exploratory analysis
- Risk profiling and identification of relevant patterns
- AI-supported delinquency prediction
- Interpretation and communication of analytical findings
- Development of an AI-driven collections strategy

4.8 Methodology

The methodology followed the sequence documented by the simulation activities. First, the data was considered from an exploratory and risk-profiling perspective. Next, AI was applied conceptually/practically to delinquency prediction. The resulting insights were then connected to business reporting and data storytelling. Finally, the analytical and predictive insights were used to inform an AI-driven collections strategy.

4.9 Expected Outcomes

- Better understanding of exploratory data analysis and risk profiling.
- Understanding of AI-assisted delinquency prediction.
- Improved ability to communicate analytical findings through business reporting.
- Understanding of data storytelling in a business context.
- Understanding of how AI can contribute to collections strategy and prioritization.

4.10 Certificate and Verification

The original certificate states the program title as “GenAI Powered Data Analytics Job Simulation,” identifies the document as a Certificate of Completion, and records October 15th, 2025. It states that practical tasks were completed over October 2025 in four areas: exploratory data analysis and risk profiling; predicting delinquency with AI; business report and data storytelling for collections strategy; and implementing an AI-driven collections strategy. The certificate identifies Tom Brunskill as CEO, Co-Founder of Forage and states that it was issued by Forage, with enrolment and user verification codes.
